

ETHOS Cyber Security Services

Essentials & Essentials Plus

ETHOS

ETHOS Cyber Security Services

Cyber Essentials is a simple but effective, Government backed scheme that will help you to protect your organisation, whatever its size, against a whole range of the most common cyber-attacks.

There are 5 control areas covered by Cyber Essentials:

The focus of the incident planning needs to address these questions:

- Use of firewalls
- Secure settings for your devices and software
- Controlling who has access to data and services
- Protecting systems from viruses and other malware
- Keeping devices and software up to date

With **Cyber Essential Plus** you get all the protection of Cyber Essentials but with the added layer of protection from an external vulnerability scan, a desktop assessment, and an internal network vulnerability scan.

ETHOS will implement any of the mandatory controls that are missing, strengthen the controls already in place, and guide the organisation through the Cyber Essentials certification.

ETHOS team will collect and submit all the evidence required and manage the process through to issuance of your certification. We will use a handpicked IASME Consortium accredited certification body to independently assess the application we make on the organisations behalf, to issue your certification.

ETHOS will facilitate and prepare for the additional Cyber Essentials Plus assessment checks to ensure successful assessment. Once completed, the Cyber Essentials Plus badge and certificate can be displayed on the organisations website and added to marketing material.

If you would like to bid for central government contracts which involve handling sensitive and personal information or the provision of certain technical products and services, you will require Cyber Essentials Certification. More information on these requirements is available from Gov procurement .

We hope this information is useful and provides an overview of Cyber Essentials and Essentials Plus. Whatever the level of certification you may require, we can advise and support a successful process. To discuss your requirements, please contact us for an initial conversation.
